

AAVULA DEEPTHI

Mahabubnagar | 8019464797 | deepthiaavula@gmail.com | [LinkedIn](#)

OBJECTIVE

A highly organized and hard - working individual looking for a responsible position to gain practical experience.

EDUCATION

Secondary Board
Panchavati Vidyalaya High School, Mahabubnagar
2019 – 2021

Signed By: Deepthi

Intermediate Board
Rishi junior college, Mahabubnagar
2021 - 2023

Malla Reddy College of Engineering for Women's, Hyderabad
Bachelor of Technology in Computer Science Engineering

Hyderabad, Telangana
2023-2027

- GPA: 8.9
- Technical Skills & Languages: C, Python, java
- Soft Skills: Time management, Problem-solving, Leadership, Communication skills, Analytical skills.

PROJECT

Analysis of women safety in Indian cities using ML on tweets

- Languages/Technology Used: Python , Machine Learning Libraries.
- Analyzing women's safety in Indian cities using machine learning on tweets involves extracting public opinions and sentiments from social media platforms like Twitter. By collecting geotagged tweets related to women's safety, ML models can classify sentiments (positive, negative, neutral) and identify key issues or concerns voiced by people in different regions. Natural Language Processing (NLP) techniques like sentiment analysis and topic modeling can be used to gauge public perception of safety, detect patterns in real-time, and highlight areas where intervention is needed. This analysis can help policymakers and organizations address safety concerns more effectively and provide timely responses to urban issues.

Audio to Sign Language Translation

- Audio to Sign Language Translation is a technology-driven solution that converts spoken words into sign language gestures, enabling effective communication for individuals with hearing impairments. The system works by first capturing audio input through a microphone, then using **speech recognition algorithms** to convert the audio into text. The recognized text is processed using **natural language processing (NLP)** techniques to understand its meaning and structure. Finally, the system maps the text to corresponding **sign language gestures**, which are displayed using animated avatars or video clips. This process facilitates real-time, intuitive interaction between hearing and deaf communities, improving accessibility and inclusion in various social and professional environments

CERTIFICATES

Programming Essentials in C, **Cisco**.

Programming Essentials in Python, **Cisco**.

Cambridge English Empower C1 Level Course, **Cambridge**.
